## Understanding Suboxone and Its Uses

Suboxone is a combination medication that contains:

- **Buprenorphine** – a partial opioid agonist that helps reduce withdrawal symptoms.
- **Naloxone** – an opioid antagonist that prevents misuse or overuse of the medication.

This dual action allows patients to manage opioid cravings effectively while preventing dependency relapse. It is commonly prescribed for:

- **Opioid dependence treatment**
- **Withdrawal management**
- **Maintenance therapy for recovery programs**

By balancing the body's opioid receptors safely, Suboxone helps users regain control and stability during recovery.

## **Available Strengths and Dosage Options**

Suboxone is available in multiple strengths and delivery forms:

- **Suboxone 2mg/0.5mg** – For initial or low-dose maintenance therapy.
- **Suboxone 4mg/1mg** – Moderate strength for progressing recovery stages.
